

**Water finds its way every time!
Protect the resource - Protect the common good!**

Thursday, 30.03.2017
11:00 am - 4:30 pm
Messe Berlin, Marshallhaus

Water is the connection of two gases and a substance which cannot really exist. Through evaporation it is in a continuous circulation. The usable water resource varies regionally and during the year. There is nothing on earth that lives and does not contain water. All plants, animals and humans depend on access to clean water. Therefore, water is regarded as a common good, which may not be appropriated by individuals for profit-striving.

Disputes over the privatization of water supply and sewage are taking place in this context. The debates about the way of a careful handling with the natural resource water and how it can be protected for future generations are therefore also so vehement. When the water by natural phenomena paves his way, it is suddenly clear how all of us are affected, although the daily use seems self-evident.

The Alliance of public Water Management (AöW) was founded to preserve water as a common good, for securing the municipal task. This includes the legal framework as well as the protection of water. We want to take stock in this event and crystallize the future requirements.
